IDENTIFIERS *Colorado; Transfer Rates (College)

ABSTRACT

Based on data submitted annually by publicly supported postsecondary institutions in Colorado, this report presents three sets of detailed data tables on student graduation, transfer, and persistence rates from fall 1986 through fall 1991. The first set of tables presents completion and persistence rates for first-time two-year college students in their second, third, fourth, fifth, and sixth fall term after initial enrollment, covering fall terms 1986 through 1990. The data include a summary of state totals and a separate table for each institution showing the number and percent of students by residence status (in-state versus out-of-state), enrollment status, ethnicity, gender, and academic versus vocational designation who: (1) received a degree or certificate without transferring; (2) received a degree or certificate and transferred; (3) transferred without a degree or certificate; (4) are still enrolled at the initial institutions; and (5) are enrolled at another two-year institution in the system. The second set of data tables summarizes transfer rate data for the same student groups, four years after initial enrollments in both 1986 and 1987. The final set of tables presents data on students at four-year institutions. Following a table of state totals, each institutional table shows the number and percent of students by residence status, enrollment status, ethnicity, and gender, who, in the second, third, fourth, fifth, and sixth fall term after initial enrollment, have received a Bachelor's degree at the same or a different institution, are still enrolled, or have transferred to a two- or four-year institution. A brief introductory narrative presents summary findings illustrated by 10 figures in graph form. (PAA)

COMPLETION AND PERSISTENCE REPORT, COLORADO PUBLIC HIGHER EDUCATION, FALL 1986 THROUGH FALL 1991

The document summarizes completion and persistence data for Colorado public higher education institutions. It reports on data collected by the Commission for fall 1986 through fall 1991, and presents information on first-time students starting in fall 1986, fall 1987, fall 1988, fall 1989, and fall 1990. It is the third report on this subject -- the last report was published in November 1991.

The primary purpose of this October 1992 report is to present tables for each institution that report on several completion (graduation) and persistence percentages. There is a very brief summary section, but the report is primarily made up of three tables: reporting on rates for two-year colleges, four-year colleges, and transfer rates for the two-year colleges. A more detailed report is planned for spring 1993. That report will include data for FY 92 and fall 1992 that will enable reporting of graduation rates after six years for the fall 1986 class. The spring 1993 report will also conform to "student right-to-know" definitions mandated by the federal government.

Description of Data Used in the Tables

All data is for students entering higher education for the first time in a fall term. For two-year colleges, this includes students identified as either degree-seeking or non-degree-seeking; only degree-seeking students are included for the four-year colleges. Data was obtained from Student Unit-Record Data System (SURDS) Fall Enrollment Files submitted by the institutions since fall 1986¹. Data is shown for the entire sector and then individually for each institution in the sector. Since two schools, Adams State College (ASC) and Mesa State College (MESA), have both two-year and four-year programs, students who start college at these institutions are identified as being either two-year or four-year students when they begin. As a result, the two-year students from ASC and MESA are included in the tables for the two-year colleges² and the four-year students are included in the four-year college tables.

Each table starts with completion and persistence rates for the total number of students in each class. This is followed by percentages for in-state and out-of-state students. The next rows of each table include only in-state students and present rates for students who enroll in their first term for less than six credit hours, for 6 through 11 credit hours, or for 12 or more credit hours (full-time). The final rows of each table include only in-state, full-time students. Rates are displayed by ethnic group, by gender, and in the case of two-year colleges, by program type and age group.

Note: whenever a subgroup is fewer than 10 in size, all completion and persistence percentages are blanked out on these reports.

¹Fall 1986 data is not available for Northeastern Junior College (NJC), and fall 1986 data for Colorado Mountain College (CMC), Morgan Community College (MCC), and Trinidad State Junior College (TSJC) contained data errors that made it unusable for this analysis. Data is complete and usable for all other institutions and for all other fall terms. The fall 1986 data for Colorado School of Mines (CSM), however, includes some students with institutional student identification numbers rather than social security numbers. The computed persistence and completion rates for the fall 1986 CSM entering class, therefore, may be less than actual rates.

²Students who go from the two-year to the four-year programs at ASC and MESA are reported as transfer students.

Summary of Two-Year College Rates

The first table presents completion and persistence data for two-year colleges. Five rates are presented for each class and these rates are computed in the second, third, fourth, fifth, and sixth fall after initial enrollment when possible. The five rates are:

- the percent who complete a two-year degree or certificate, but do not subsequently transfer to a four-year college;
- the percent who complete a two-year degree or certificate and then transfer to a four-year college;
- the percent who transfer to a four-year college without first completing a two-year degree or certificate¹;
- the percent who are still enrolled at their initial institution, and therefore remain a potential graduate at a subsequent point in time; and
- the percent who are still enrolled at another two-year college, representing retention in the public system.

These rates can be added to compute a total completion rate, a total transfer rate, or a total completion/persistence rate.

Figures 1 through 5 summarize data from this table for in-state, full-time students by ethnic group. Each figure shows the entering class for an ethnic group for each of the five years, and the percentage who received a degree or certificate and/or transferred after one, two, three, four, or five years. Note that each bar of each figure represents a different entering class (the size of class is printed at the top of each bar) and each class can be tracked for one fewer year. For example, the rate after one year can be computed for each class; the rate after two years can only be computed for the first four classes; the rate after three years for the first three classes, etc. Only the fall 1986 class can be tracked for five years with the data currently available. The data shows large differences between ethnic groups and little progress over time. For example:

- the one-year rate for Whites remained fairly constant, between 11% to 12% (Figure 1);
- the two-year rate for Whites increased for the fall 1987 class, but dropped for the fall 1988 and fall 1989 classes back down toward the fall 1986 rate of 26%;
- there are large differences between ethnic groups; the rate after five years for Hispanics is about 31% compared to 42% for Whites, the five year rate for Blacks is 22%, for Asians it is 31.5%, and for American Indians it is 30%; and

¹Once a student is reported as a transfer, they are no longer tracked, therefore the table does not provide an indication of the retention of students after they transfer.

- there is little improvement in these differential rates over time with the exception of American Indians and Blacks, whose rates improve for the fall 1987 class, but remain fairly stable afterwards.

Figure 5¹

Summary of Transfer Rates

The November 1991 publication presented transfer rates based on the percentage of students who complete twelve or more credit hours at their initial community college and who then subsequently transfer within four years. The next table repeats this data for the 'fall 1986² class and also calculates it for the fall 1987 class.

As in the previous table, each section of the table for the state summary and each institution reduces the size of the population, from total, to in-state, and then to in-state students that take twelve or more hours at their initial institution. Six rates are displayed for each row:

- a total rate, computed as the sum of the five subsequent rates and representing and overall transfer/completion/persistence rate;
- the percent who transfer without a degree or certificate;
- the percent who transfer and who also complete a degree or certificate;
- the percent who complete a degree or certificate but who don't transfer within the four-year period;
- the percent still enrolled at their initial institution in the fifth fall; and

¹Data is for in-state, first-time students who enroll full-time in their first term.

²The data reported in this table for the fall 1986 class is not exactly the same as that reported in the last report. The November 1991 report excluded all students with missing ethnicity and/or gender information from the analysis, these students are included in the current analysis.

- the percent enrolled at another system two-year college in the fifth fall.

The sum of the two transfer rates represents the overall transfer rate. For in-state students taking twelve or more hours at their initial institution, the total transfer rate was 18.5%¹ for the fall 1986 class and 20.2% for the fall 1987 class. Overall, the table shows a significant increase in rates between the fall 1986 and fall 1987 classes. These increases apply across ethnic group. Total transfer/completion/persistence rates went from 47.0% to 52.7% for Whites, from 35.9% to 40.5% for Hispanics, from 27.3% to 33.5% for Blacks, from 41.3% to 45.6% for Asians, and from 43.9% to 47.9% for American Indians. Differentials still exist, however, between ethnic groups, with Whites having the highest overall rates and Blacks the lowest.

Summary of Four-Year College Rates

The final table presents graduation and persistence rates for the four-year colleges. As with the previous tables, five rates are reported for each row of data:

- first, the percent receiving a bachelor's degree at their initial institution;
- second, the percent receiving a bachelor's degree within the system but not at their initial institution;
- third, the percent still enrolled at their initial institution in the second, third, fourth, fifth, and sixth fall;
- fourth, the percent enrolled at another state four-year college²; and
- fifth, the percent enrolled at a state two-year college.

Figures 6 through 10 summarize the total system graduation rate (sum of the first two percentages) for in-state, full-time students by ethnic group. The figures provide a comparison between the four-year rates for the fall 1986 and fall 1987 classes and show the five-year rate for the fall 1986 class:

- for most ethnic groups, the four-year graduation rate decreased for the fall 1987 class, dropping from 20.1% to 18.8% for Whites, from 11.2% to 10.4% for Hispanics, from 6.4% to 3.4% for Blacks, and from 22.1% to 19.0% for Asians. Only American Indians showed an increase, from 8.2% to 19.6%, but the total number of American Indian students remains quite small;

¹Less than the 20.7% rate reported in the last publication because of the inclusion of students with unreported (unknown) ethnicity and gender, these students have very low transfer rates in the table, perhaps because of other data elements being missing for these students.

²This is not a transfer rate as computed for the two-year colleges since a student's enrollment status is computed in each year, for example, a student who transfers in year two but who is not enrolled anywhere in year three is dropped from the transfer percentage in year three, in the two-year tables a transfer is treated as a "completion".

there is a large increase in graduation rates after five years, but differences between ethnic groups remain high -- the five year rate for Whites is 46.4%, compared to 30.2% for Hispanics, 19.3% for Blacks, and 23.0% for American Indians; only Asians have a five year graduation rate comparable to Whites, at 47.0%.

Summary Tables

The remainder of the document consists of the three summary tables. Comparisons between institutions can be made by examining comparable fields for different institutions within each table. Individuals interested in more complete analysis may obtain copies of the Paradox files used in generating these tables by writing or calling the Office of Information and Research at the Commission and providing either 5 1/4" or 3 1/2" high density disks.

¹Data is for in-state, first-time freshmen who enroll full-time in their first term.

¹ Because of data reporting errors, Native American students are not separately identified from White students in the NJC data, other enrollment data for NJC indicates that there are fewer than 10 Native Americans enrolled in most years.
